

DIRECT OIL HEATER

B360

HEATER FUNCTIONING DIAGRAM

The oil heater with high pressure direct combustion nebulizes the combustible inside a chamber, that burns in connection to a igniter. The products of combustion are mixed with the ambient air flow, generated by rotation of the fan and pushed towards the external part of the generator. It is designed with the most modern standards of functionality and durability. Safety devices always assure a proper functioning of the heater, the noise is reduced to a minimal level and the accurate choice of materials guarantees a high efficiency

SPECIFICATION

Max Capacity	kW	111	Oil consumption	kg/h	8,83
	Kcal/h	95460	Tank capacity	l	105
	Btu/h	379000	Autonomy	h	10
Combustible	Oil / Kerosene		Tension	V	220-240
Net weight	Kg	86	Frequency	Hz	50
Gross weight	Kg	110	Rated current	A	4,6
Pump pressure	bar	13	Noise level	dBa	77
Ø Fan	mm	500			
Airflow	m ³ /h	3300			

PACKING

Packaging dimensions	mm	1600 x 750 x 1180
Effective dimensions	mm	1670 x 700 x 940
Pieces for pallet	n ^o	1
Pieces full truck	n ^o	50

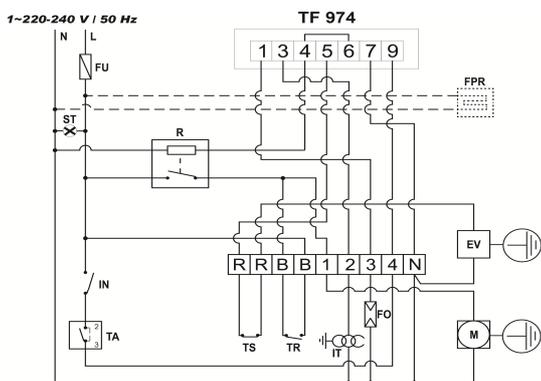

COMPONENTS

Pump	Danfoss BFP - rotary with element filter
Nozzle	Danfoss 2,00 GPH 80° H
Flame control	Electronic board with separately transformer
Igniter	Bifilar electrodes
Oil filter	In line da 60 µm
Overheat thermostat	Series / N.C. until at 90°C
Post-ventilation thermostat	Series
Motor	Asynchronous, monophase, with thermal protection, Clockwise rotation, 1650 g/1'
Tank	Steel sheet
Ambient thermostat	Predisposition for connecting an ambient thermostat

ACCESSORIES

Ambient thermostat	Thermostat TH5
Filter pre-heating	Predisposition for connecting a filter-preheating

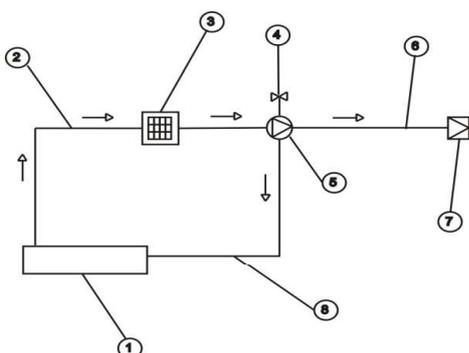

WIRING DIAGRAM

L	:	Line
N	:	Neutral
FU	:	Fuse
ST	:	Power indicator
R	:	Relay
M	:	Motor
FO	:	Photocell
IT	:	Trasformer
IG	:	Elettrodes
IN	:	Switch

FPR	:	Filter pre-heatinh
TR	:	Cooling thermostat
TS	:	Overhaet thermostat
TF974	:	Flame control
TA	:	Ambient thermostat
EV	:	Electrovalve
